GitHub: <https://github.com/digvijay2004> | Machine Learning Engineer | LLM & Generative AI Engineer | MLOps

EDUCATION

M.S. Computer Science — Western Michigan University, USA

Aug 2023 – Dec 2025

Courses: Machine Learning, Advanced AI, NLP, Big Data, Information Retrieval, Algorithms, Database Management Systems

B.S. Computer Science — Savitribai Phule Pune University, India

Jun 2019 – Apr 2022

Courses: Python, Data Analytics, DBMS, Software Engineering, OS, Blockchain, Web Technologies, Software Testing

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript, R, C#

AI / ML: PyTorch, TensorFlow, Hugging Face Transformers, Scikit-learn, Fine-tuning (LoRA/PEFT), NLP, Computer Vision, Deep Learning, Reinforcement Learning

Generative AI & LLMs: LangChain, CrewAI, RAG Pipelines, Prompt Engineering, Vector Databases (FAISS/Chroma), Multi-Agent Systems, A2A Coordination

MLOps & Deployment: MLflow, Weights & Biases, Docker, CI/CD, FastAPI Model Serving, REST APIs, AWS, Azure, GCP

Databases: PostgreSQL, MySQL, FAISS

Concepts: Model Evaluation & Benchmarking, Feature Engineering, Data Pipelines, Observability & Monitoring, Agile/Scrum, OOP

EXPERIENCE

Software Engineer | Bright Mind Enrichment, USA

Feb 2026 – Present

- Designed and deployed 5+ production-grade RESTful APIs using FastAPI, supporting automated data processing workflows handling 1K+ records/day; integrated PostgreSQL with optimized queries, reducing data retrieval latency by 20%.
- Prototyped an LLM-powered internal tool using LangChain and OpenAI API to automate report summarization, reducing manual review time by 40%; containerized with Docker and deployed via CI/CD pipeline.
- Led end-to-end feature development (design → build → test with pytest → deploy), maintaining high code quality and test coverage in an Agile team of 3–5 engineers; improved system efficiency by 20%.

Associate Software Engineer – Backend & Data Engineering | Yash Infotech Pvt. Ltd., India

May 2021 – Jun 2023

- Built automated Python data pipelines and optimized SQL queries to analyze application logs across 3–6 enterprise systems, reducing mean time to resolution by 20% and enabling data-driven operational insights.
- Developed and maintained RESTful APIs using FastAPI and Flask supporting scalable microservices; contributed to API documentation and versioning, improving developer onboarding and release reliability by 25%.
- Diagnosed and resolved 20–30 system issues weekly, improving system stability and reducing downtime by 20% across internal enterprise applications.

Software Engineer Intern | Yash Infotech Pvt. Ltd., India

Jan 2021 – Apr 2021

- Supported backend feature development, bug fixes, and system troubleshooting across 1–3 projects; resolved 20–30 support issues per week, improving resolution turnaround by 15–25%.
- Assisted with API testing, database queries, and application configuration in a real-world development environment; gained hands-on experience with Python, SQL, and REST API workflows under senior engineer mentorship.

PROJECTS

RAG-Powered Q&A System | LangChain, FAISS, Hugging Face, Groq, AWS

Sep 2025 – Nov 2025

- Built a retrieval-augmented generation (RAG) pipeline using LangChain, FAISS, and Hugging Face Transformers; chunked and embedded PDF documents with sentence-transformers, served answers via REST API endpoint.
- Deployed on AWS EC2 with Docker; applied prompt engineering techniques to improve answer relevance and reduce hallucinations, achieving consistent context-grounded responses.

Sensitive Content Detection — Real-Time ML Inference | Python, Scikit-learn, FastAPI, Docker

Jan 2024 – Apr 2024

- Engineered a real-time ML inference pipeline on 5,000+ labeled samples; applied feature engineering and model evaluation (F1, precision/recall) achieving 30% efficiency gain for production deployment.
- Designed modular backend API using FastAPI to serve model predictions; supported multi-domain use cases including classroom moderation, parental safety, and enterprise training environments.

Car Image Generation Using GANs | PyTorch, Generative AI

Jan 2024 – Apr 2024

- Trained a GAN model to autonomously generate photorealistic synthetic car images; optimized training stability using learning rate scheduling and gradient clipping.
- Applied generative AI for design prototyping workflows, reducing dependence on real-world image datasets and enabling faster iteration in early-stage development.

Predicting Non-Motorized Crash Incidents — Supervised ML | Scikit-learn, Pandas, MLflow

Sep 2023 – Nov 2023

- Built a classification model on 10K+ records; performed EDA, feature selection, and hyperparameter tuning achieving 87% accuracy; tracked experiments with MLflow and delivered actionable safety insights.
- Evaluated multiple models (Random Forest, XGBoost, Logistic Regression) using cross-validation; visualized risk patterns to support intelligent transportation decision-making.

CERTIFICATIONS

DeepLearning.AI — LangChain for LLM Application Development (Coursera, 2025) — LangChain, RAG, LLM engineering

Develop a Vision-Enabled Generative AI Application (Microsoft, 2026) — Computer Vision, Image Analysis, Generative AI

Google Foundations: Data, Data Everywhere (Coursera, 2023) — SQL, data analytics, visualization

Web Development Bootcamp (Udemy, 2022) — Full-stack, Node.js, MongoDB
